<https://www.linkedin.com/in/d-l-chakravarthi-440a7a219/>

Visakhapatnam, AP, India

SKILLS

Blockchain	Hardhat
Smart Contracts	ReactJs
Ethereum	Hyperledger
Solidity	Cryptography
Web3	DeFi

EDUCATION

RGUKT AP-IIIT

2020 - Present

Bachelor of Technology in Mechanical Engineering

BLOCKCHAIN DEVELOPMENT

RGUKT AP-IIIT

2018 - 2020

Pre - University Course

ZPHS - YERRAVARAM

2015 - 2018

School Education

CERTIFICATIONS

- Expert level FULL STACK BLOCKCHAIN DEVELOPMENT course in 12 months. Completed 3 major projects and several minor projects.
- Intermediate level USABLE SECURITY course in 10 months.
- PYTHON DEVELOPMENT - Expert level course in 10 months with attempting Assignments.

SUMMARY AND OBJECTIVE

- Designed and implemented decentralized applications using smart contracts and Blockchain technology on Ethereum and Hyperledger Fabric.
- Proficient in Solidity, JavaScript, HTML, CSS, and ReactJs, and familiar with essential development tools like Hardhat, Remix, and web3.js. Contributed to diverse projects highlighting expertise in decentralized application development and blockchain technology.

WORK EXPERIENCE

Full Stack Blockchain Developer Intern

COSMOCLAW

2021-2023

- Experienced Full Stack Blockchain Developer with a team of 5 specializing in decentralized apps, smart contracts, and blockchain technology.
- 2 years of expertise in Solidity, JavaScript, HTML, CSS, and ReactJs for effective application development.
- Working with blockchain platforms for over 2 years, using tools like Hardhat and Remix and prioritizing data security through cryptography and best practices.

Open-Source contribution

- Solidity Smart Contract Libraries:** Contributed to an open source library of over 10 Solidity smart contract templates and utility functions, improving code reusability and efficiency for developers.
- Hardhat Plugin Development:** Created a custom plugin for Hardhat, used by over a team of 10 developers, streamlining blockchain testing and deployment processes with features like contract verification and gas optimization.
- Web3.js Integration with React:** Developed reusable components and hooks that have been downloaded and integrated by more than 15 developers, simplifying the integration of blockchain functionality into React applications.

PROJECTS

FundZone - A Investment Dapp to Farmers

- In 7 months, collaborated with 6 blockchain developers on the Polygon network to create an investing DApp for farmers, employing blockchain technology for transparency and security.
- Solidity, JavaScript, HTML, CSS, and ReactJs were used to develop and construct the decentralized application, which included about 75% smart contracts and blockchain functionality.

NFT MARKET PLACE - Buying and selling of NFT Dapp

- In 3 months, a team of 5 individuals created an NFT marketplace DApp for buying and selling digital assets, utilizing blockchain technology and smart contracts.
- Developed a safe and user-friendly NFT trading platform for almost 100 NFTs that use Solidity, the Ethereum blockchain, and web development technologies such as JavaScript, ReactJs, and others.
